Dear Liz,

Here – for the second time! – is the manuscript for ASPC Vol. 131, 'Boulder-Munich II: Properties of Hot, Luminous Stars'. This contains a small correction to one of Aufdenberg's figures, and I've taken the opportunity to update any 'in press' references where the paper concerned has since been published.

I haven't included the mock-ups of the front cover, the title page, and the frontispiece that I sent with the first mailing, but I think the only point to note there is that Nolan's colour plate should be p. x.

With very best wishes,

Ian Howarth
